Projects

Mooch – *Created at Daemon Dash 2015 (September 26, 2015 – September 27, 2015)*

- Developed Chrome extension that allows users to share some accounts without transferring any login information (i.e. account names, emails, passwords)
- Communicated with a backend server via a RESTful API created by other team members
- Won 2nd place for Best Digital Forensic Related Hack by Cipher Tech Solutions

ArtRoom – *Created at YHack 2014 (October 31, 2014 – November 2, 2014)*

- Developed Android app that integrated data retrieved via HTTP requests from back-end server
- Integrated Moxtra SDK to allow users to chat with each other about scanned objects
- Won runner-up for "Best Use of Google APIs" at YHack 2014

Friendcast – *Created at HackRU Fall 2014 (October 11, 2014 – October 12, 2014)*

- Utilized Facebook Graph API, Parse Push Notifications, and the Google Maps Place Search API to develop a social, location-aware Android app
- Won "Favorite Yodle Hack" at HackRU Fall 2014

CSGO Bets – *August 2014 – Feb 2015*

- Developed Android app that utilized web scraping (jsoup) and other websites' APIs to display match information
- Was published on the Play Store and received over 13,000 downloads and 290 ratings

Whatchamacallit – *Created at HackRU Spring 2014 (April 12, 2014 – April 13, 2014)*

- Utilized Google Glass SDK and reverse dictionary API to display results based on user input
- Won "Best Educational Hack" at HackRU Spring 2014
